TCS Numerical Ability Preparation One Shot | Aptitude Prep for TCS NQT & TCS Ignite Smart ...

A: Rs. 20,000 → 12 months

B: Rs. 30,000 → 6 months

Investment Ratio (A:B) = 20,000 : 30,000 = 2 : 3

Time ratio (A:B) = 12 : 6 = 2 : 1

⇒ Profit ratio = Investment ratio × time ratio

Profit ratio (A:B) = 2×2 : 3×1 = 4 : 3

$$\boxed{P_R = I_1T_1 : I_2T_2 : I_3T_3 : \ldots}$$

Q1. Balu and Somu started the Bar, Balu invests Rs 35000 for 8 months and Somu invests Rs 42000 for 10 months. Out of a profit of Rs.31,570. Balu share is

① $P_1 : P_2 = I_1 T_1 : I_2 T_2$

$= 35000 \times 8 : 42000 \times 10$

$= \cancel{35000}^{\cancel{5}\,2} \times \cancel{8}^{\cancel{4}} : \cancel{42000}^{\cancel{6}\,3} \times \cancel{10}^{\cancel{5}}$

$= 2 : 3$

$2 + 3 = 5$

Balu's share $= \frac{2}{5} \times 31570$

$= 12628$

Somu's share $= \frac{3}{5} \times 31570$

or

$31570 - 12628$

$= 18942$

Q2. Aman started a business investing Rs.70000. Rakhi joined him after six months with an amount of Rs.105000 and Sagar joined them with Rs.1.4 lakhs after another six months. The amount of profit earned should be distributed in what ratio among Aman, Rakhi and Sagar respectively, after three years if Aman started the business?

0 yr 6 m 12 M 3 yr

2 yrs

Aman Rakhi Sagar

2.5 yrs

3yrs

Aman → 3yrs

Rakhi → 2.5 yrs

Sagar → 2 yrs

$= I_1T_1 : I_2T_2 : I_3T_3 \Rightarrow 70,000 \times 3 : 1,05,000 \times 2.5 : 1,40,000 \times 2$

6 : 7.5 : 8

$\boxed{12 : 15 : 16}$

Q3. A, B and C jointly thought of engaging themselves in a business venture. It was agreed that A would invest Rs. 6500 for 6 months, B, Rs. 8400 for 5 months and C, Rs. 10,000 for 3 months. A wants to be the working member for which, he was to receive 5% of the profits. The profit earned was Rs. 7400. Calculate the share of B in the profit.

A. Rs. 1900

B. Rs. 2660

C. Rs. 2800

D. Rs. 2840

For managing, A received = 5% of Rs. 7400 = Rs. 370.

Balance = Rs. (7400 - 370) = Rs. 7030.

$\frac{7400}{2}$

Ratio of their investments = (6500 x 6) : (8400 x 5) : (10000 x 3)

= 39000 : 42000 : 30000

= 13 : 14 : 10

$\therefore$ B's share = Rs. $\left(7030 \times \frac{14}{37}\right)$ = Rs. 2660.

Q4. A, B, C subscribe Rs. 50,000 for a business. A subscribes Rs. 4000 more than B and B Rs. 5000 more than C. Out of a total profit of Rs. 35,000, A receives:

A. Rs. 8400

B. Rs. 11,900

C. Rs. [illegible]00

D. Rs. 14,700

Let C = x.

Then, B = $x + 5000$ and A = $x + 5000 + 4000 = x + 9000$.

C + B + A

So, $x + x + 5000 + x + 9000 = 50000$

$\Rightarrow 3x = 36000$

$\Rightarrow x = 12000$

A : B : C = 21000 : 17000 : 12000 = 21 : 17 : 12.

$\therefore$ A's share = Rs. $\left(35000 \times \frac{21}{50}\right)$ = Rs. 14,700.

Q5. Three partners shared the profit in a business in the ratio 5 : 7 : 8. They had partnered for 14 months, 8 months and 7 months respectively. What was the ratio of their investments?

$$I = \frac{P}{T}$$

$$LCM(7, 8, 14) = 56$$

A. 5 : 7 : 8

B. 20 : 49 : 64

C. [illegible] : 28 : 21

None of these

$$I = \frac{5^{\times 4}}{14_{\times 4}} : \frac{7^{\times 7}}{8_{\times 7}} : \frac{8^{\times 8}}{7_{\times 8}}$$

$$= \frac{20}{56} : \frac{49}{56} : \frac{64}{56} \Rightarrow 20 : 49 : 64$$
