Q1. Sunny Deol can do a piece of work in 10 days and Ravina Tandan can do the same piece of work in 15 days, find how many days it would take for the work to finish if Sunny Deol and Ravina Tandan work together?

M2 LCM Method

LCM(10, 15) = 30

Total work = 30 chairs

Sunny

10 days = 30 chairs

1 day = $\frac{30}{10}$ = 3 chairs

Ravina

15 days = 30 chairs

1 day = $\frac{30}{15}$ = 2 chairs

Together

1 day = 3+2 = 5 chairs

1 day → 5 chairs

$\frac{1}{5}$ days ← 1 chair

$\frac{1}{5} \times 30$ days ← 30 chairs

6 days ← 30 chairs

Ans: 6 days

Q1. Sunny Deol can do a piece of work in 10 days and Ravina Tandan can do the same piece of work in 15 days, find how many days it would take for the work to finish if Sunny Deol and Ravina Tandan work together?

M3 PDS Trick

Product, Divided by, Sum

$A \rightarrow x$ days

$B \rightarrow y$ days

$A+B = \frac{xy}{x+y}$ days

Sunny → 10 days

Ravina → 15 days

Together → $\frac{10 \times 15}{10+15} = \frac{\cancel{10}^{2} \times 15}{\cancel{25}_{5}} = 6$ days

Valid people

Sunny → more efficie

Efficiency $\propto \frac{1}{\text{time}}$

Q3. Jethiya alone can do half of a work in 5 days, Daya alone can do three-fifth of the same work in 9 days and Sunderlal alone can do two-third of the same work in 8 days. Find the number of days will take for the work to be completed if all three work together.

Method

10 days
days } LCM (10, 15, 12) = 60

Total work = 60 chairs

Jetha
10 days = 60 chairs
1 day = $\frac{60}{10}$ = 6 chairs

Daya
15 days = 60 chairs
1 day = $\frac{60}{15}$ = 4 chairs

Sundar
12 days = 60 chairs
1 day = $\frac{60}{12}$ = 5 chairs

6+4+5
= 15 chairs
↓
1 day

$\frac{1}{15}$ days = 1 chair

$\frac{1}{15} \times 60$ days = 60 chairs

4 days

Q4. Daya takes 4 days to complete [illegible] days to complete 1/6th of the same work and ACP Praduman takes 5 days to complete half the job. If all of them work together for 3 days and Daya and ACP Praduman quit. How long will it take for Abhijeet to complete [illegible]maining work alone?

www.youtube.com – To exit full screen, press Esc

ACP 10 days = 180 chairs

1 day = $\frac{180}{10}$ = 18 chairs

Total work

[illegible] day = 15+10+18 = 43 chairs

3 days = 43 × 3 = 129 chairs

Total work = 180 chairs

Work left = 180 − 129 = 51 chairs

51 chairs ← Abhijeet alone

1 day = 10 chairs

$\frac{1}{10}$ days = 1 chair

$\frac{1}{10}$ × 51 days ← 51 chairs

5.1 days or 6 days [depending on options]

Time & Work

Q4. Daya takes 4 days to complete 1/3 of job, Abhijeet takes 3 days to complete 1/6th of the same work and ACP Praduman takes 5 days to complete half the job. If all of them work to[illegible] for 3 days and Daya and ACP Praduman quit. How long will it take for Abhijeet to comp[illegible] remaining work alone?

Daya → 12 days
Abhijeet → 18 days
ACP → 10 days

M2 दोलोजी Trick

$$\frac{\text{Daya Work}}{\text{Daya Alone Work}} + \frac{\text{Abhijeet Work}}{\text{Abhijeet Alone Work}} + \frac{\text{ACP Work}}{\text{ACP alone work}} = 1$$

$$\frac{3}{12} + \frac{x}{18} + \frac{3}{10} = 1$$

Time & Work

Q5 (VK). A can complete a piece of work in 8 hours, B can complete in 10 hours and C in 12 hours. If A, B, C start the work together but A leave after 2 hours. Find the time taken by B and C to complete the remai work.

A. 2 + (1/11)

B. 4 + (1/11)

C. 6 + (2/11)

D. 2 + (6/11)

$$\frac{2}{8} + \frac{x}{10} + \frac{x}{12} = 1$$

Final Answer : $x - 2$
