(6) Profit & Loss is a CP.

(7) Discount is always calculated on MP.

(8) $\% = \frac{\text{obtain}}{\text{Total}} \times 100$

$$\boxed{P\% = \frac{P}{CP} \times 100} \quad \boxed{L\% = \frac{L}{CP} \times 100} \quad \boxed{D\% = \frac{D}{MP} \times 100}$$

$\hookrightarrow P = \frac{P\% \times CP}{100}$

$$P = SP - CP$$

$$SP = CP + P$$

$$= CP + \frac{P\% \times CP}{100}$$

$$= CP\left[1 + \frac{P\%}{100}\right] \Rightarrow CP\left[\frac{100}{100} + \frac{P\%}{100}\right]$$

$$\boxed{SP = CP\left[\frac{100 + P\%}{100}\right]}$$

$$L = CP - SP$$

$$SP = CP - L$$

$$= CP - \frac{L\% \times CP}{100}$$

$$= CP\left[1 - \frac{L\%}{100}\right]$$

$$= CP\left[\frac{100}{100} - \frac{L\%}{100}\right]$$

$$\boxed{SP = CP\left[\frac{100 - L\%}{100}\right]}$$

Q1. Find the cost price of Amul Paneer which is sold at Rs. 300 at a loss of 25%?

SP = Rs. 300

L = 25%

M1

$$SP = CP\left[\frac{100 - L\%}{100}\right]$$

$$300 = CP\left[\frac{100-25}{100}\right]$$

$$\overset{4}{\cancel{300}} = CP \times \frac{\overset{1}{\cancel{75}}}{100}$$

$$\boxed{CP = 400}$$

M2

SP = 75% of CP

$$300 = \frac{75}{100} \times CP$$

$$\boxed{CP = 400}$$

M3

CP = Rs. 100 $\xrightarrow{\times 4}$ 400 Rs. ✓

L = Rs. 25 $\xrightarrow{\times 4}$ 100 Rs.

SP = Rs. 75 $\xrightarrow{\times 4}$ 300 Rs.

Q1. Find the cost price of Amul Paneer which is sold at Rs. 300 at a loss of 25%?
L% = 25% = 25/100 = 1/4
L
CP
CP = Rs. 4 ×100 Rs. 400
L = Rs. 1 ×100 Rs. 100
SP = Rs. 3 ×100 Rs. 300
Answer: Rs.400

Q2. The cost price of an article is Rs. 560 and Munna Bhaiya
profit of 12.5%. Find the selling price?
P% = 12.5% = 12.5/100 = 1/8
P
CP
CP = Rs. 8 → Rs. 560 (×70)
P = Rs. 1 → Rs. 70 (×70)
SP = Rs. 9 → Rs. 630 (×70)
Answer: Rs.630

Q3. A mobile costing Rs. 24000 is sold and a profit of 10% is received. Find selling price of mobile.

10% of 24000

CP = Rs. 24000

P = 10% = Rs. 2400

SP = 24000 + 2400 = Rs. 26400

Answer: Rs.26400

Q4. A bicycle has a cost price of Rs. 3000 and is sold at a loss of 15%. Find the selling price.

3000

10% = 300

5% = 150

15% = 450

3000
− 450
2550

Q5. An item is sold for Rs.240 thereby getting a profit of 20%. Find cost price of item.

$P = 20\% = \frac{20}{100} = \frac{1}{5}$ ← CP, P

$\frac{240}{6} = 40 \times 6$

$\Rightarrow 40$

CP = Rs. 5 $\xrightarrow{\times 40}$ Rs. 200 ✓

P = Rs. 1 $\xrightarrow{\times 40}$ Rs. 40

SP = Rs. 6 $\xrightarrow{\times 40}$ 240

Q7. A shopkeeper sells items at cost price but he uses a weight of 920 gram for 1 Kg. Find his gain percent.
TATA CONSULTANCY SERVICES
P = 80 gm
CP = 920 gm
P% = P/CP × 100
= 80/920 × 100
= 8.69%
80 gm/1000 gm × 100
= 8% profit

Q9. A dealer sells items at 20% profit and also uses a weight which is 10% less than actual, find his net profit percent.

TATA CONSULTANCY SERVICES

$$P\% = \frac{P}{CP} \times 100 = \frac{20\% + 10\%}{90\%} \times 100 = \frac{30\%}{90\%} \times 100$$

$$= 33.33\%$$

Answer: 33.33%

Q10. Peter buys a brand new Honda bicycle for Rs. 800/-. He uses it for a year and then sells it. He makes a profit of 10% in this transaction. Then again he buys a new cycle but finds that the price has gone up by 20 %. He uses it for a year and then sells it for a profit of 30%. Find the average annual profit of Peter.

10% = 96
×3 ×3

96
× 3
288

80

$800 \xrightarrow{10\%} 800 + 80 = \boxed{}$

$800 \xrightarrow{20\%} 800 + 160 = 960 \xrightarrow{30\%} 960 + 288 = \boxed{}$

Total profit in 2 years = 80 + 288 = 368

Average annual profit = $\frac{368}{2}$ = Rs. 184
